

TYPE SHYT COIN (\$TPSH) — White Paper

Version 1.1 | 14 June 2025

“Wear the meme. Earn the token.”

Executive Summary

TYPE SHYT COIN (ticker **\$TPSH**) is a Solana-based meme-utility token that turns streetwear into a crypto on-ramp. Each limited-edition T-shirt carries a scannable QR code that drops TPSH into the wearer’s wallet, routes instant referral rewards, and drives a community treasury earmarked for global micro-grants. The token was launched on Pump.fun on 14 June 2025 with an initial self-buy of \approx \$150 in SOL; no other liquidity has been added. Trading is fully curve-locked. DAO governance will activate in **Phase 2 (Q4 2025)** once Snapshot + Gnosis Safe are deployed.

1 Background & Vision

Meme coins explode in price but rarely deliver real-world value. Small merchants struggle with payment hurdles, and under-banked communities miss crypto entirely. TPSH bridges the gap by weaponising merchandise itself: **scan a shirt, get a token, join the movement.**

2 Problem Statement

1. **Utility void** — most memes have no purpose beyond speculation.
 2. **Middlemen fees** — creators/merchants lose 5-15 % to card processors.
 3. **Barriers to entry** — new users face KYC, gas fees, technical friction.
-

3 Solution Overview

<i>Layer</i>	<i>Function</i>
QR-coded merch	<i>Each shirt embeds a URL that triggers a 5 TPSH airdrop (first scan only) via a public faucet wallet.</i>
Referral rewards	<i>10 % of every shirt sale flows to the ambassador who sourced the buyer.</i>
Curve-locked token	<i>Pump.fun bonding curve prevents rug-pull liquidity.</i>
DAO treasury (Phase 2)	<i>1 % of every transfer streams to a Gnosis Safe; holders vote on burns, grants, and upgrades.</i>

4 Token Economics

4.1 Key Parameters

<i>Parameter</i>	<i>Value</i>
Total Supply	1 000 000 000 TPSH (fixed; mint authority will be revoked before Phase 2 launch)
Decimals	6
Royalty	2 % Pump.fun + 0 % creator fee
Transfer Fee	4 % → 2 % LP / 1 % Burn / 1 % Treasury

4.2 Initial Distribution

<i>Bucket</i>	<i>%</i>	<i>Unlock/Vest</i>
<i>Community Airdrop & Faucet</i>	<i>40 %</i>	<i>Immediate claim (5 TPSH per new wallet)</i>
<i>Curve Liquidity (Pump.fun)</i>	<i>20 %</i>	<i>Permanently locked in bonding curve</i>
<i>Team & Advisors</i>	<i>15 %</i>	<i>24-month linear vest</i>
<i>Marketing & Partners</i>	<i>15 %</i>	<i>3-month cliff, 9-month vest</i>
<i>DAO Treasury</i>	<i>10 %</i>	<i>Controlled by multi-sig once DAO live</i>

5 Technology Architecture

- **Solana SPL token** — immutable symbol **TPSH**, 6 decimals.
 - **Bonding curve** — Pump.fun exponential curve; contract address [XXXXXXXXX...](#) (see /SECURITY.md).
 - **Faucet** — open-source airdrop script (Rate-limit = 1 address/6 h).
 - **Website** — static site deployed via Gamma (<https://tpshcoin.io>).
-

5.1 Legacy Orion Token (TYPE \$*%#)

A preliminary SPL mint—ticker **TYPE \$*%#** (ID: TYP SH...)—was created on Orion before the official Pump.fun launch. It carries the same logo and 1 B fixed supply but a typographical symbol-based ticker. While trading is paused, the mint address remains on-chain and will be used for an optional **1-for-1 wrapping bridge** in Phase 3.

Migration plan

1. **Snapshot** Orion holders at Phase 2 launch.
2. **Mint a wrapper contract** on Solana that locks each TYPE \$*%# and issues an equal amount of TP SH-w.
3. **Bridge UI** in the mobile dApp lets users swap without gas.
4. After 90 days the treasury will burn any un-swapped TYPE \$*%# tokens.

This honours early supporters without confusing new buyers—the official ticker remains **TP SH** everywhere.

6 Roadmap

Phase	Date	Milestones
1 — Launch & Pilot	Q2 2025	• Pump.fun token live• Faucet QR tees printed (500 units)• Telegram (link below) opened
2 — DAO & Regional Expansion	Q4 2025	• Gnosis Safe treasury & Snapshot voting• Revoke mint/freeze• 100 merchants onboarded
3 — Mobile dApp & Bridge	Q1 2026	• iOS/Android scanner wallet• Bridge to Arbitrum (ERC-20 wrapper)
4 — Global Scaling	Q3 2026+	• 1 000+ merchants• Debit-card partnership• DAO developer grants

7 Governance (Planned)

- **Gnosis Safe multi-sig** will control treasury keys (2-of-3 signers).
 - **Snapshot** off-chain voting; weight = circulating TPSH, no quorum for minor grants, 10 % quorum for burns or treasury uses.
-

8 Security & Audits

- Mint & Freeze authorities will be sent to **0x000...dead** before DAO launch.
 - Pump.fun curve contract is audited (see Pump docs).
 - Third-party audit of faucet & multisig scheduled for **Q4 2025**.
-

9 Legal Disclaimer

TPSH is a utility token that grants access to merch perks, referral rewards, and DAO voting. It is **not** designed or marketed as an investment contract. Token price is volatile; do not spend more than you can afford to lose. Holding TPSH does not guarantee profit or dividends. Consult a licensed professional in your jurisdiction before purchasing.
